SikaCeram® CleanGrout

CEMENTITIOUS FLOOR/WALL TILE GROUT FOR JOINTS 1–8 MM

INFORMATIONS SUR LE PRODUIT

SikaCeram® CleanGrout is a cementitious setting, floor /wall tile grout powder for use in joints from 1–8 mm in width. Additives contained in the powder provide protection against mould, bacterial and fungal growth while maintaining a colour stable, abrasion resistant, water repellent durable finish. For indoor and outdoor use.

CARACTÉRISTIQUES / AVANTAGES

- Floor and wall application
- Water-repellent
- Abrasion resistant
- High degree of hardness
- UV resistant
- Frost proof
- Contains mould protection

DOMAINES D'APPLICATION

Grouting the following tile types:

- Ceramic
- Earthenware
- Glass mosaic
- Marble and other natural stones
- Grès porcelain

Grouting tiles for the following high performance and demanding applications:

- Swimming pools
- Heated floors
- Commercial / Industrial / Residential environments
- Facades

DESCRIPTION DU PRODUIT

Base chimique	Polymer modified, portland cement based, with selected fine silica/quartz sand, water retainers and other special additives.				
Conditionnement	5 kg and 2 kg bags. Refer to current price list for packaging variations.				
Aspect / Couleur	Colours:

These figures are theoretical and do not allow for any additional material due to surface porosity, surface profile, variations in level or wastage etc.

Consumption can be also calculated with the following formula:

$$\text{Consumption (g/m}^2\text{)} = A \times B \times [(C + D)/(C \times D)] \times 140.$$

A = Gap width (mm)

C = Tile length (cm)

B = Tile height (mm)

D = Tile width (cm)

INSTRUCTIONS POUR L'APPLICATION

QUALITÉ DU SUPPORT / PRÉTRAITEMENT

Check joints are dry, clean, and clear of excess adhesive, contaminants and tile joint spacers. Remove from joint before grout application.

For applications in hot climates / environments, or on absorbent substrates, thoroughly pre-dampen the surface immediately prior to product application.

Avoid any ponding / standing water on the surface. Surface must not be damp to touch.

MÉLANGE

Pour the recommended amount of clean cold water into a suitable, clean mixing container.

Slowly add SikaCeram® CleanGrout powder to the water while mixing using a low speed (~500 rpm) drill mixer. Then mix thoroughly until the material is fully mixed and lump free. Avoid entraining air into the mix by over mixing.

Allow the product to stand for 2–3 minutes before re-mixing for 30 seconds.

The finished mix has a creamy consistency, uniformly coloured and is easy to apply and spread.

For areas requiring only small quantities, these can be mixed by hand. Measure the water : powder ratio carefully as small differences in the mix ratio can result in colour shade variations.

For high-performance and demanding applications, such as heavily-trafficked floors, exposed facades, swimming pools or for additional flexibility, the water can be replaced with a solution of SikaCeram® Latex-Grout (Refer to the individual Product Data Sheet)

APPLICATION

Before grouting check adhesive has fully set.

SikaCeram® CleanGrout is applied using an appropriate tool such as a grout spreader, squeegee or grouting float/trowel.

Completely fill and compact the joints uniformly. If required, finish grout with a grout finishing tool

while grout is wet.

Using the same spreader/ float, remove excess grout from the tile surfaces moving the tool diagonally across the joints.

When the grout is touch dry. Use a damp sponge or sponge float to clean the tile surfaces. Clean sponge regularly with clean water.

When grout has set hard enough in the joint (finger nail hard). Polish the tile surfaces by wiping with a clean, soft dry cloth.

If SikaCeram® LatexGrout has been used instead of water in the grout mix, polish the tile surfaces immediately after the initial cleaning with a damp sponge.

NETTOYAGE DES OUTILS

Clean all tools and application equipment with water after use. Hardened material can only be removed mechanically

LIMITATIONS

- Do not exceed the recommended amount of water in the mix. The mix must never be fluid.
- Do not add or allow any additional water to be added into the mixed product during or after mixing.
- Prevent contact of freshly applied material with water (including rain), except during cleaning operations. Also prevent exposure with excess atmospheric humidity / condensation or residual moisture in the substrate etc.
- Avoid significant temperature variation during application and setting times, as well as excessive draughts, forced ventilation or winds.
- Excess water and ventilation, temperature variations, application on very porous tiles or on substrates leading to rapid water absorption etc. can result in colour shade variations.
- When coloured grout is applied for aesthetics such as on polished porcelain or natural stone tiles, always carry out cleanability testing on a small area prior to full application.
- On highly absorbent tiles, it is always recommended to thoroughly pre-dampen the surface before grou-

ting.

- Always apply SikaCeram® CleanGrout in a continuous operation and do not interrupt for more than two hours in the same room or area of tiling.
- Premature exposure to water or excess water in the mix can result in white efflorescence on the grout surface.
- Avoid application in direct sunlight to avoid cracking in the joint.
- Ensure grout has set sufficiently before carrying out the tile cleaning procedure to avoid grout being removed from joint.
- Do not add anything to the product that is not specified in this Product Data Sheet.
- Do not use for any applications not explicitly described in this Product Data Sheet.
